

Debate Table

Enterprise Production Package Verification Report

DEBATE_TABLE_ENTERPRISE_PACKAGE_VERIFIED

The current Debate Table v1.2 Phase 1 text application was packaged from a clean Git tree, verified from a cold extraction, tested in a fresh environment, and booted from the extracted ZIP. The source repository remained unchanged.

Source and test baseline

SOURCE	TESTS
Branch: master	Source tree: 84 passed , 0 failed, 0 warnings
Commit: d7be33579c0f986db74c0b221b5bdf06a9d280df	Extracted release: 84 passed , 0 failed, 0 warnings
Exact tag: none	Interpreter: CPython 3.14.6
Working tree: clean	

Package verification

Manifest	34 hashed files; 35 total ZIP entries
Manifest mismatches	0
Cold extraction	PASS - exactly one top-level application folder
Boot and serve	PASS - launched from the extracted package
HTTP	200 - expected Debate Table frontend loaded
Shutdown	PASS - CTRL_BREAK_EVENT; no traceback
Orphans	0 application processes; 0 child processes; 0 port 8700 listeners
Security and privacy	No secret or private-home-path finding; no Git metadata, caches, or model weights

Runtime scope

Required Ollama models	phi4:14b and qwen2.5:14b-instruct
Models bundled	NO
Voice / TTS	NOT IMPLEMENTED
Release phase	v1.2 Phase 1 complete / pre-Voice Phase 2
Engine modified	NO
Repository modified	NO - SOURCE_REPOSITORY_MODIFIED = NO

Production deliverables

ZIP

D:\Debate Table Releases\Debate_Table_v1.2_Phase1_Production_20260811_201116.zip

SHA-256 file

Integrity record

ZIP size	133,553 bytes (0.127 MiB)
SHA-256	be6cfe8c43f1d9ed52ac22d28c18957b5bc762f0a6df35dfcd99610aa3fea383

Operational notes

Open <http://127.0.0.1:8700> after startup. Press **C** while the browser page has focus to open the operator drawer. Local Voice / TTS is not included. Model weights must be installed separately through Ollama. The Windows shutdown test returned the repository's documented process code 3 while still completing cleanly: no traceback, child process, or listener remained.

Acceptance result: all required packaging, integrity, extraction, environment, test, boot, HTTP, shutdown, orphan, and source-invariance gates passed.
